

BAO NGO LE

Senior QC

github.com/ngolebao90

Senior Quality Engineer with 9+ years of experience in software testing across web and mobile applications within Agile delivery environments. Strong expertise in API testing, microservices validation, and quality assurance for enterprise-scale systems. Experienced in shift-left testing, continuous testing, and integrating QA activities into CI/CD pipelines to ensure early defect detection and stable software delivery.

Hands-on experience in testing REST APIs in microservices-based architectures and supporting contract-based testing practices. Strong understanding of testing processes in financial and data-driven systems, including credit decisioning and transaction-based workflows. Skilled in test design, test execution, and defect management, with strong collaboration across cross-functional teams to ensure high-quality product delivery.

TECHNICAL SKILLS:

- Automation & Programming: Playwright, TypeScript, Java.
- Testing Frameworks & Tools: Postman, Swagger, SoapUI, Datadog (Log Analysis & Distributed Tracing).
- Test Management & Platforms: Jira, Microsoft Azure, Confluence.
- Database & Analysis: SQL Server, PostgreSQL, Data Integrity Validation.
- Methodologies: Agile (Scrum/Kanban), Waterfall, SDLC, STLC, Shift-Left Testing, Risk-based Testing.

SOFT SKILLS:

- Leadership & Mentoring, Cross-functional Collaboration, Workflow Optimization, Analytical Thinking, Requirement Analysis, English Communication.

Work Experience

Senior QC

GameJam

Sep 2024 - Present

- Analyzed business and technical requirements, ensuring complete test coverage and contributing to the successful delivery of multiple projects on schedule and within scope.
- Collaborated with Product Owners, Business Analysts, and developers to clarify requirements, identify edge cases, and improve workflow efficiency by 80%.
- Designed, developed, and maintained comprehensive test plans, test scenarios, test cases, and checklists based on functional and non-functional requirements.
- Performed end-to-end manual testing of web applications, validating 10+ core business features and reporting defects with detailed reproduction steps to improve product quality and user experience.
- Executed smoke, sanity, regression, integration, and user acceptance testing (UAT) to ensure application stability and release readiness.
- Performed API testing using Postman to validate RESTful APIs, including request/response verification, authentication, status codes, response schema, and business logic.
- Validated backend data using SQL by writing queries to verify data integrity, database transactions, and consistency between the application and database.
- Collaborated closely with developers to analyze root causes, reproduce issues, and verify bug fixes, reducing pre-production defects and improving release quality.

- Participated actively in Agile Scrum ceremonies, including sprint planning, daily stand-ups, backlog refinement, sprint reviews, and retrospectives, ensuring effective communication and timely delivery.
- Championed a Shift-Left testing approach by involving QA during requirement analysis and technical design, identifying potential issues early and reducing post-development defects by 80%.
- Developed and maintained automated end-to-end regression test suites using Playwright with TypeScript, implementing reusable page object models and increasing automation coverage to 70%.
- Integrated Playwright automation into the CI/CD pipeline, enabling automated regression testing for every build and providing rapid feedback to the development team.
- Monitored test execution, analyzed automation results, and maintained test scripts to ensure long-term reliability and minimize flaky tests.
- Created and maintained QA documentation, including test reports, defect summaries, and release sign-off reports, providing stakeholders with clear visibility into product quality.
- Monitored production logs and errors using Sentry after release to quickly detect, triage, and report issues, improving incident response time and production stability.

Project: Superfine.

Technology: Postman, Swagger, Jira.

Domain: Digital Marketing.

Senior QC

TiTan Technology

Jan 2021 - Sep 2024

- Reviewed and analyzed business requirements to identify test scenarios, clarify project objectives, and ensure complete test coverage throughout the software development lifecycle.
- Collaborated with Product Owners and Business Analysts to clarify more than 10 business requirements, improving requirement accuracy, reducing ambiguities, and supporting timely project delivery.
- Designed and maintained comprehensive test plans, checklists, test scenarios, and test cases based on business and functional requirements.
- Performed end-to-end manual testing of web applications, validating functional, UI, and business workflows while identifying and reporting defects with detailed reproduction steps.
- Executed smoke, sanity, regression, and integration testing to validate application stability, ensure new features did not impact existing functionality, and improve overall software quality.
- Performed smoke testing for every release to verify critical functionality before deployment and support high-quality production releases.
- Worked closely with Business Analysts and developers to investigate, reproduce, prioritize, and verify defects, ensuring high-quality deliverables while providing daily progress updates to project managers.
- Performed API testing using Postman to validate RESTful APIs, including request/response verification, authentication, status codes, and business logic.
- Wrote SQL queries to validate database transactions, verify data integrity, and ensure consistency between the application and backend database.
- Utilized Datadog dashboards, logs, and distributed tracing to identify root causes of performance bottlenecks and service failures, enabling proactive issue resolution and improving system reliability.
- Trained and mentored three new QA team members on testing processes, defect reporting, Agile practices, and QA tools, reducing onboarding time by 90%.
- Improved manual testing efficiency by implementing risk-based testing strategies and standardized QA documentation, accelerating defect identification and reducing mean time to resolution (MTTR).
- Promoted a quality-first culture by coordinating cross-functional planning sessions and maintaining transparent defect-tracking dashboards, improving collaboration across engineering teams.
- Led and mentored a team of five QA engineers in advanced troubleshooting, log analysis, and API validation, significantly enhancing team technical expertise and performance.
- Participated actively in Agile Scrum ceremonies, including sprint planning, backlog refinement, daily stand-ups, sprint reviews, and retrospectives, collaborating with cross-functional teams to deliver high-quality software on schedule.

Project: Auvenir.

Technology: SQL Server, Postman, Microsoft Azure.

Domain: Financial.

QC Engineer

iDentalsoft

Feb 2018 - Dec 2020

- Analyze, review, and discuss business and functional requirements with stakeholders.
- Create comprehensive test checklists and develop detailed test cases based on project requirements.
- Develop, configure, and execute testing environment setup and validation procedures.
- Update version numbers and maintain release notes for each software release.
- Perform manual testing for web and mobile applications to ensure functionality, usability, and quality.
- Support the development team by verifying bug fixes, performing regression testing, and monitoring defect resolution.
- Collaborate with cross-functional teams, including developers, business analysts, and project managers, to deliver project objectives and address leadership requests.

Project: Dental.

Technology: Jira, Google Sheet, XML, Postgres SQL, Chrome, Windows server.

Domain: Healthcare.

QC Engineer

FPT Software

Jan 2016 - Jan 2018

- Read, analyzed, and discussed business requirements with stakeholders to ensure a clear understanding of system functionality.
- Developed test checklists, test cases, and test scenarios based on project requirements and functional specifications.
- Executed API test cases using SoapUI, validated request/response data, and provided daily testing status reports.
- Performed manual testing on web and mobile applications, including testing on real Android and iOS devices to verify functionality, usability, compatibility, and user experience.
- Conducted API testing and database testing to validate business logic, data integrity, and system functionality.
- Logged, tracked, and communicated defects using a bug tracking system, collaborated with the development team to resolve issues, and performed retesting and regression testing after fixes were implemented.
- Supported the development team during the testing cycle and monitored defect status to ensure timely resolution.
- Collaborated closely with Business Analysts, Developers, and other stakeholders to clarify requirements and improve software quality.

Project: iiPoint.

Technology: Jira, SQL Server, Chrome, IE.

Domain: Loyalty.
