

NGUYEN KHANH DUY

QA ENGINEER

Nguyen Khanh Duy

dustin-nkd

Ho Chi Minh City, Vietnam

PROFESSIONAL SUMMARY

ISTQB CTFL-certified QA Engineer with **3+ years of experience** in web and API testing across KYC/AML compliance and cybersecurity products. Designed **500+ test cases** covering functional, negative, and edge-case scenarios, and added **15 automated regression tests** using Selenium and Python. Experienced in requirement analysis, API validation, exploratory testing, and pre-release verification, with a focus on identifying requirement gaps early and improving test coverage for critical user flows.

WORK EXPERIENCE

1. QA Engineer | Trulioo

Jul 2025 – Present

- Designed and maintained **300+ test cases** for KYC/AML identity verification workflows across multiple markets, covering document expiry, identity mismatches, country-specific requirements, and negative scenarios; mapped test coverage to acceptance criteria throughout sprint delivery.
- Reviewed acceptance criteria with Product and Development teams before and during implementation, identifying an average of **4–7 requirement gaps or ambiguities per ticket** across KYC/AML and identity verification workflows, and clarifying expected behavior before test execution.
- Executed **50–150 validation scenarios per test cycle** across **8+ sprints**, covering functional, regression, and negative testing for KYC workflows; documented defects and recurring failure patterns in Jira to support investigation, prioritization, and regression coverage.
- Validated API behavior across **15+ KYC identity provider integrations** using Postman, comparing live requests and responses against vendor documentation and identifying schema, field-mapping, and response-handling discrepancies before test case execution.
- Prepared UAT scenarios, configured test data across **15+ sandbox environments**, and guided Product and other non-QA stakeholders through KYC identity verification workflows to support release validation and sign-off.

2. QA Engineer | OpenText (Cybersecurity Division – Webroot)

Aug 2022 – Jun 2025

- Added **15 automated regression tests** using Selenium and Python during a **3-month automation initiative**, covering Dashboard, User Management, and Multi-site Management workflows and reducing repeated manual execution for these scenarios.
- Designed and maintained **200+ test cases across three Webroot product lines**, mapping test scenarios to requirements and acceptance criteria and applying black-box and exploratory testing to cover documented workflows, negative scenarios, and additional edge cases.
- Analyzed recurring defect patterns across multiple releases and collaborated with the engineering team to identify contributing conditions and add targeted regression scenarios for endpoint protection and security awareness products.
- Executed smoke, sanity, and sprint regression testing as pre-release quality gates for Webroot products, covering cross-browser testing on Chrome, Firefox, and Edge for Security Awareness and multi-version Windows testing via VMware for Endpoint Protection.
- Maintained **98%+ monthly classification accuracy** while reviewing and categorizing **10,000+ URL submissions per month** for BrightCloud's threat intelligence database, classifying websites as malicious, suspicious, or legitimate according to defined threat taxonomy.

PROJECTS

1. AutomationExercise UI Testing Framework

[Python](#) [Java](#)

Technologies: Python · Pytest · Selenium WebDriver · Java · TestNG · Maven · Allure Report · YAML-based configuration.

- Built separate UI automation framework implementations in **Python and Java** using a component-based Page Object Model, with test logic, page objects, reusable UI components, and utility layers organized independently.
- Implemented the same suite of **26 UI test scenarios** in both Python and Java, covering registration and login, product search, cart, checkout, invoice download, and subscription workflows; integrated Allure reporting and automatic screenshots on failure to support test result analysis.
- Implemented YAML-based configuration and reusable test-data generation for the Python framework, including command-line environment selection; built a thread-safe DriverManager with ThreadLocal<WebDriver>, Selenium Manager, and DataFaker for the Java framework.

2. Book Management API Testing Framework

[Source Code](#)

Technologies: Python · Requests · Pytest · Allure Report · python-dotenv.

- Designed a layered REST API automation framework with separate client, service, test-data, and test layers to improve code organization, reuse, and maintainability.
- Implemented a configuration loader using python-dotenv to validate required environment variables at startup and fail early with clear errors when configuration values were missing.
- Covered the full CRUD lifecycle with positive and negative API scenarios, validating status codes, response schemas, and business rules; supported command-line execution through Pytest and generated test reports with Allure.

3. DocVault — QA Document Hub

[Live Demo](#) [Source Code](#)

Technologies: JavaScript (ES6+) · Tailwind CSS · Web Crypto API (AES-256-GCM) · GitHub Contents API · Toast UI Editor · morphdom.

- Built an **offline-first, browser-based QA workspace** organizing **11 document categories**, including test cases, bug drafts, API specifications, runbooks, and environment notes; implemented client-side encryption using **AES-256-GCM** with PBKDF2-derived keys and encrypted sharing without sending decryption keys to the server.
- Implemented cross-device document synchronization through the **GitHub Contents API**, along with global search (Ctrl+K), a Kanban task board, and a Toast UI Markdown editor with reusable structured document templates.

SKILLS

- **Test Automation Languages:** Python, Java.
- **Test Automation:** Selenium WebDriver, Pytest, TestNG, Maven, Allure Report.
- **API Testing:** Postman, Python Requests, REST API validation.
- **Testing:** Functional, Regression, Smoke, Sanity, UAT, Exploratory, End-to-End, Cross-Browser, Black-Box, and Risk-Based Testing.
- **QA Practices:** Test Case Design, Requirements Analysis and Traceability, Shift-Left Testing, Defect Lifecycle Management, Defect Pattern Analysis, Agile/Scrum, Cross-Functional Collaboration, and UAT Support.
- **Tools & Platforms:** Jira, Confluence, OTTR (internal test management tool), Git, GitHub, GitLab, VMware.
- **Parallel & Cloud Testing:** Configured and executed tests using Selenium Grid with Docker, BrowserStack, and Sauce Labs.
- **Domain Knowledge:** KYC/AML and Customer Due Diligence workflows, Identity Verification, Endpoint Security, Security Awareness, Threat Intelligence, and URL Threat Classification.

CERTIFICATIONS

- **ISTQB Certified Tester Foundation Level (CTFL)** 2024
Vietnamese Testing Board (VTB)
- **Advanced Software Test Professional** AGEST Vietnam — 2024
- **Fundamental Software Test Professional** AGEST Vietnam — 2024

EDUCATION

- **University of Science, VNU-HCM** 2017 – 2020
Associate Degree in Information Technology
