

YURI GOYDO

C#/.NET DEVELOPER - 6 NĂM KINH NGHIỆM

Quốc tế, Russian Federation

I currently live in Russia, and in the near future I want to move to Vietnam and work and develop there.

He has experience working as a leading software engineer in the field of robotics.

Participant of scientific research works.

I am 28 years old, unmarried, ready to move.

My English level is acceptable, and I can safely read and translate the documentation.

He graduated from the university and received a master's degree in mechatronics and robotics. He worked at various enterprises with conventional stands and robotic complexes, as well as with heavy special equipment. The main focus for me is computer vision. He mostly worked in teams, and sometimes he did large-scale projects alone.

KINH NGHIỆM LÀM VIỆC

06/2025 NTC Integrated Systems

Hiện tại C#/.NET developer

- Legacy support for net40, net461, net6.0.
- Windows, linux, and web development.
- Development of new features for the product.

KỸ NĂNG

- Full Stack Developer
- Back End Developer
- C++
- C# (.NET Core)
- Python Developer

- Unit Testing.
- A computer vision module has been developed for a local product with the ability to exchange data with IP cameras.

02/2024 • *Metran, an industrial group of CJSC*

06/2025 **C#/.NET developer**

- Development of software for test benches.
- Modification of old programs.
- C#, SQL.

05/2021 • *Alfa-Intech*

05/2022 **Lead Software Engineer**

Programming of Kuka robotic complexes

- System administration and equipment repair
- Writing scientific papers
- Writing client-server applications in C++/C#
- Remote access to computer files (C++)
- - Computer vision (Camera position calibration based on opencv)

(Left due to salary delay)

Hiện tại

DST Ural

Design Engineer (programmer)

- Development of a mobile application on Dart/Flutter
- Development of programs for geodetic tasks in Python
- Development of software for the leveling system based on the Unity game engine (C#)
- Development of client-server applications in Python
- Development of a computer vision-based security system for Linux-based special equipment (python+bash)
- Work with students (setting tasks, monitoring performance)
