Binh Tan, HCM

EXPERIENCE

Web Developer

- Manage projects, work with stakeholders Write back-end code with programming languages.
Create and work on Front-end, using a lot of HTML, CSS, JavaScript, etc.
Initialize and develop database Build API Check the application testing process

App Mobile Developer

image processing app

📅 01/2024 - 5/2024 📍 HCM

- Employed understanding of UI and UX interfaces to improve in-app mobile features.
Implemented UI system functionality to improve design.
Coding the back-end for the app system and calling the AI api for the app.

SKILLS

Programming Languages: Python, R, Java, C++

Machine Learning Frameworks: TensorFlow, Keras, PyTorch, Scikit-Learn

Back-end Development: Skilled in coding back-end functionalities using C#, JavaScript and python. Capable of implementing dynamic app features, including business logic and data processing, to enhance app functionality.
Usable frameworks (like Django, FastAPI, Flask)

Data Analysis and Visualization: Pandas, NumPy, Matplotlib, Seaborn.

.Soft Skills: Problem-solving, Analytical thinking, Effective communication, Team collaboration

Tools and Platforms: Jupyter Notebook, Git, Docker, AWS

CAREER OBJECT

Become an elite software developer

.With a never-ending desire to become an excellent mobile application developer, I am looking for a dynamic and interesting working environment to develop my programming and creative skills. With a broad knowledge of programming tools and languages, I am determined to develop incredible mobile app applications that integrate artificial intelligence technology. Commitment and a collaborative spirit are what I bring, along with precision and a willingness to learn and adapt in a diverse work environment.

EDUCATION

Computing & Mathematical Science.

Greenwich University

📅 4/2024

Project

Image processing app

Built and trained a CNN model to classify images into different categories using TensorFlow and Keras. Using API ML deepfillv2

Achieved an accuracy rate of 92% on the validation set.

Deployed the model on a web application using Flask for real-time image classification.
