SUMMARY

Full Stack Developer with 4 years of product experience in healthcare SaaS. Strong in SvelteJS micro-frontend, Golang backend services, PostgreSQL optimization, Redis cache, WebSocket notifications and product-oriented workflow design.

SKILLS

Frontend: SvelteJS, SvelteKit, TypeScript, Tailwind CSS, micro-frontend, dashboard UX

Backend: Golang, RESTful API, gRPC, JWT/OAuth2, WebSocket, Redis

Database: PostgreSQL, schema design, query tuning, migration, reporting SQL

Domain: SaaS, clinic operations, pharmacy inventory, finance report, patient workflow

EXPERIENCE

Senior Full Stack Developer | NovaClinic SaaS | 05/2021 - Present

- Led development of SvelteJS micro-frontend modules for reception, examination, pharmacy, finance and analytics dashboards.
- Designed Golang services communicating through RESTful API and gRPC for multi-tenant clinic workflows.
- Implemented WebSocket event stream for live patient queue status across reception and doctor rooms.
- Used Redis caching for tenant configuration and reduced database load by 32% during peak hours.
- Optimized PostgreSQL query plans for monthly revenue reports, reducing execution time from 18 seconds to 3 seconds.
- Worked directly with UI/UX, QA and DevOps to release production features and handle incident fixes.

KEY PROJECT

Hospital Integration Connector

- Integrated payment gateway callbacks and simulated LIS/PACS data exchange for lab/radiology workflows.
- Added audit log and retry mechanism for external integration failures.

EDUCATION

B.S. Software Engineering - 2020
