PROFESSIONAL SUMMARY

Results-driven Artificial Intelligence Engineer with over 2 years of experience in designing, developing, and deploying AI-powered solutions. Proficient in machine learning, natural language processing, and computer vision technologies. Proven ability to collaborate with cross-functional teams to tackle business challenges through innovative AI methodologies. Committed to optimizing AI models and ensuring ethical practices in AI deployment.

SKILLS

- **Programming Languages:** Python
 - **Machine Learning Frameworks:** TensorFlow, PyTorch, Scikit-learn
 - **Natural Language Processing:** NLP techniques, sentiment analysis
 - **Computer Vision:** Image classification, object detection
 - **Databases:** SQL, NoSQL
 - **API Development:** RESTful APIs
 - **Containerization & CI/CD:** Docker, Kubernetes
 - **Version Control:** Git
 - **Cloud Platforms:** AWS, Azure
 - **Others:** Agile/Scrum methodologies, MLOps
-

WORK EXPERIENCE

Artificial Intelligence Engineer

FPT, Hanoi, Vietnam

May 2021 - Present

- Designed and developed machine learning models deployed in production, contributing to a 20% increase in operational efficiency.
- Collaborated with software engineers and product managers to identify AI opportunities and translate business requirements into scalable AI solutions.
- Integrated AI models into existing software systems, improving user experience through enhanced functionalities.
- Conducted performance monitoring and continuous improvement of AI models, ensuring robustness and reliability.

AI Intern

Tech Solutions Co., Ho Chi Minh City, Vietnam

Jan 2020 - Apr 2021

- Assisted in the development of machine learning algorithms for data analysis and predictive modeling.
 - Supported the research and implementation of emerging AI technologies, contributing to project documentation and reporting.
 - Developed data preprocessing pipelines and workflows for feature engineering.
-

PROJECTS

AI-Powered Chatbot

Technologies: Python, NLP, TensorFlow

- Developed and deployed a chatbot that processes natural language inputs to provide customer support in real time, resulting in a 30% reduction in response time.

Image Classification System

Technologies: Python, Scikit-learn, OpenCV

- Built a computer vision model capable of classifying images with an accuracy of over 85%, utilized in an application to automate content moderation.
-

EDUCATION

Bachelor of Science in Computer Science

University of Hanoi, Hanoi, Vietnam

Graduated: Dec 2019
