

# PHAM TRUONG ANH TU

Java Backend Developer

---

## SUMMARY

Java Backend Developer with 5+ years of experience building enterprise applications using Java and Spring Boot. Most of my work has focused on translating business requirements into maintainable backend services, relational database models, and business workflows. I prefer simple designs that keep systems easier to understand, maintain, and evolve.

---

## TECHNICAL SKILLS

**Programming:** Java

**Backend:** Spring Boot, Spring Security, Spring Data JPA, Hibernate

**Database:** MySQL, PostgreSQL, MongoDB

**Messaging & Cache:** Apache Kafka, Redis, Hazelcast

**Tools:** Docker, Git, Maven, Postman

---

## PROFESSIONAL EXPERIENCE

### HUNG THINH CORPORATION

Java Backend Developer

Oct 2023 – Present

Develop backend services for enterprise applications supporting internal business operations across multiple systems, including document management, apartment management, booking, reporting, and other business platforms used by more than **1,500 internal users**.

## Selected Contributions

- Designed and implemented backend modules supporting the complete document lifecycle, including document storage, inventory, borrowing, disposal, retention management, and approval processes.
  - Translated business requirements into relational data models for document management, inventory, request processing, and other transactional business modules.
  - Redesigned batch import processing by replacing repetitive database lookups with bulk queries and in-memory mapping, simplifying processing logic while reducing unnecessary database access.
  - Improved data access patterns by redesigning JPA repository queries and simplifying entity relationships for document-intensive business workflows.
  - Simplified complex business logic by separating responsibilities into focused service components, making business workflows easier to understand, maintain, and extend.
  - Designed RESTful APIs around business capabilities rather than database entities, helping keep service contracts stable as business requirements evolved.
  - Investigated production issues through application logs, SQL analysis, and business workflow tracing, identifying root causes and implementing permanent fixes.
  - Worked closely with Business Analysts and QA Engineers to refine business requirements, design technical solutions, and deliver maintainable backend features.
- 

## SOLIDBYTES

**Java Backend Developer**  
**Jan 2021 – Sep 2022**

Developed backend services for enterprise and real estate applications using Java and Spring technologies.

## Selected Contributions

- Designed and implemented backend services supporting transactional business processes for enterprise applications.
  - Translated business requirements into relational database schemas and RESTful APIs with a focus on maintainability.
  - Optimized SQL queries and JPA data access for business-critical operations involving relational data.
  - Refactored legacy business logic into reusable service components, reducing duplicated code and improving code readability.
  - Participated in feature design, implementation, testing, and production issue resolution throughout the software development lifecycle.
-

# **FPT SOFTWARE**

## **Java Intern Developer**

**Jun 2019 – Dec 2019**

Joined an enterprise development team to gain practical experience in Java and Spring-based application development.

## **Responsibilities**

- Developed internal application modules under the guidance of senior engineers.
- Wrote SQL queries and participated in testing activities.
- Learned enterprise software development practices, including source control, code review, issue tracking, and the software development lifecycle.

# **EDUCATION**

## **FPT University**

Bachelor of Software Engineering

2017 – 2021
