

BUI DUC ANH

Full-stack Developer with 4 years of experience specializing in .NET technologies, React.js, and enterprise web applications. Experienced in building scalable ERP, CRM, logistics, and transportation management systems with strong knowledge of ASP.NET Core, RESTful APIs, SQL Server, PostgreSQL, Redis, and modern frontend frameworks.

Skilled in optimizing system performance, developing background processing services, integrating third-party APIs, and improving production monitoring. Passionate about backend architecture, DevOps practices, CI/CD pipelines, and modern AI-assisted development workflows.

SKILLS

Back-end: C#, .NET Core, Entity Framework Core, RESTful API, SignalR, Hangfire, Redis, RabbitMQ/Queue, JWT, Design pattern.

Frontend: React.js, Next.js, TypeScript, JavaScript, Ant Design, MUI, Shadcn UI, Zustand

Database: SQL Server, PostgreSQL, Query Optimization, Data Migration

DevOps/Tools: IIS, Git, CI/CD, Jenkins, Sentry, Jira, Agile/Scrum, Codex

WORK EXPERIENCE

Sales System	May 2025 - Present
Full-stack Developer Sales platform supporting customer relationship management and business operations, including lead management, sales opportunities, and gift management modules. - Designed and developed scalable frontend modules using Next.js and React, focusing on reusable component architecture, maintainability, and consistent user experience across multiple business modules. - Integrated frontend with backend APIs to deliver seamless, data-driven user experiences - Contributed to the development of AI-ready technical documentation, including implementation guidelines, development skills, coding patterns, project conventions, and contextual documentation used to improve AI-assisted development and code generation workflows. - Discussion & brainstorming cross PO team to finalize a solution for each requirement.	Ha Noi
CRM (Customer Relationship Management) – 247Technology	Jan 2024 - Present
Full-stack Developer CRM platform designed to manage customer information, interactions, and transaction history while improving customer engagement and sales performance - Developed and delivered new frontend features using ReactJS, contributing to an approximately 15% increase in user engagement through improvements in usability, interaction flows. - Integrated third-party APIs as Omicall for call center and chat functionalities. - Contributed to backend solution design using architectural and design patterns such as Clean Architecture, N-Layer Architecture, CQRS, Mediator, Unit of Work, Repository, Strategy, and Factory patterns, improving code organization, maintainability, scalability, and testability. - Designed and implemented real-time communication features using SignalR, supporting use cases such as notifications, messaging, status updates, and user interactions. - Participated in designing the architecture and technical solution for migrating and transforming millions of records from MongoDB to SQL Server, including data mapping, validation, transformation rules... - Collaborated with cross-functional teams following Agile/Scrum methodologies.	Ha Noi
TMS (Transportation Management System) – 247Technology	Jan 2023 - Aug 2024
Back-end Developer Transportation and logistics management platform for vehicle operations, route optimization, cost management, and operational reporting. - Designed and developed backend modules using ASP.NET Core, C#, Entity Framework Core/Dapper, and SQL Server , supporting core logistics workflows including vehicle operations, routing, cost calculation, and operational data processing. - Improved database performance by optimizing complex SQL queries, indexing strategies, and data processing workflows, reducing bottlenecks in operational and reporting workloads. - Integrated Sentry monitoring and centralized error tracking, improving production observability and reducing issue detection and resolution time by approximately 20%. - Implemented asynchronous and background processing architecture using Hangfire and .NET Background Services for long-running and scheduled workloads. - Participated in maintaining and improving operational reporting systems.	Ha Noi
247Express Website – 247Technology	Jun 2022 - Jun 2023
Developer Corporate logistics website supporting shipment creation, shipment tracking, and customer interaction. - Participated in developing and modernizing the company's customer-facing website using a component-based frontend architecture. - Built and maintained administrative modules used for managing operational data, customer information, and logistics-related workflows. - Designed and implemented stateful authentication mechanisms, maintaining authenticated user sessions on the server side and managing session lifecycle, login state, and access control across protected application areas. - Implemented authorization logic based on user roles and permissions to restrict access to specific pages, modules, and administrative functions.	Ha Noi

EDUCATION

Bachelor of Software Engineering
FPT University

Aug 2019 - Aug 2023

CERTIFICATIONS

Project management (Credential ID: 23BBUBKKQDHB)  by Coursera

Mar 2023

ORGANIZATIONAL & VOLUNTEER EXPERIENCE

Developer
Technmely Community – Contributor & Developer

- Contribute IT content to Technmely's online platforms.
- Collaborate with the tech team to improve system functionality and optimize user experience across digital channels.

Technologies: NestJS, MySQL, ReactJS, TypeScript

Jan 2021 - Jun 2023
Ha Noi
