

TRAN DANG DUONG

Java Backend Developer | Spring Boot | REST API | MySQL | Redis

GitHub: github.com/DuongTranDang1004

SUMMARY

Java backend developer with 1 year of professional Web/API experience building and maintaining production REST APIs with Java and the Spring Framework, plus 3 years of academic project work. Experienced with MySQL and PostgreSQL SQL databases, MongoDB, Redis caching, JWT/OAuth2 authentication, Docker and public cloud (AWS, Azure). Solid grounding in object-oriented design and HTTP/HTTPS/TCP/UDP networking. English at IELTS 7.5, comfortable reading and writing English API documentation. Final-year IT student at RMIT University.

TECHNICAL SKILLS

- Languages and frameworks: Java Core, Java Spring Boot, Spring MVC, Spring Security, Spring Data JPA/Hibernate, REST API, WebSocket, GraphQL, OOP, SOLID
- Databases: MySQL, PostgreSQL, MongoDB, Firestore; SQL query writing, indexing, sharding, ACID transactions
- Caching and messaging: Redis, in-memory POJO caching
- Networking: HTTP/HTTPS, TCP/UDP, OpenVPN, iptables NAT and firewall rules
- Version control: Git remote workflows (branching, pull requests, code review)
- CI/CD and DevOps: Maven, Docker, Jenkins, Ansible, Kubernetes, Nginx, Apache, Prometheus
- Public cloud: AWS (EC2, S3, RDS), Microsoft Azure, Supabase
- Testing and docs: JUnit, Mockito, Postman, Swagger/OpenAPI
- Architecture: Microservices, Monorepo, MVC, MVVM, Controller-Service-Repository, DAO, DTO

LANGUAGES

- English: IELTS 7.5 (equivalent to TOEIC 950+); fluent technical reading and writing, including English API documentation
- Vietnamese: native

WORK EXPERIENCE

Backend Web Developer (Part-time), Trung Thao Automobile Company Aug 2024 - Aug 2025

Microservices and monorepo architecture serving a staff mobile app and a customer web app.

- Built and maintained 40+ server-side REST API endpoints with Java Spring Boot, supporting vehicle sales and customer interactions on the company homepage.
- Designed MongoDB schemas for inventory, customer records, and vehicle types and components, covering 10+ collections.
- Applied Redis caching to hot read-heavy fields such as latestViewDateTime and viewCount, cutting repeat-read database queries by roughly 60%.
- Secured endpoints with Role-Based Access Control and JWT validation across 3 user roles.
- Integrated the Zalo API for messaging, Zalo ID storage, access token JWT and refresh token and password reset, removing manual follow-up for around 100 customer enquiries per day.
- Gathered requirements directly from non-technical stakeholders and translated them into technical specifications and data models.

PROJECTS

Broomate: Room Rent Sharing Platform - Backend Developer, Team Lead

Oct 2025 - Jan 2026

RMIT University coursework | github.com/RMIT-Vietnam-Teaching/SEPM

- Built the REST API backend in Java Spring Boot; led a team of 5 to on-time delivery.
- Implemented Spring Security with JWT and RBAC for authentication and authorisation.
- Used Firestore (NoSQL) for complex data operations and Supabase cloud storage for media files.
- Delivered WebSocket real-time notifications and messaging.
- Achieved 95% unit test coverage with JUnit and Mockito, and published full Swagger API documentation.
- Separated development and production environments through externalised environment variables.

Secure Remote Access VPN Server - DevOps Engineer, Team Lead

2025

RMIT UNIX Systems Administration | Demo: youtube.com/watch?v=Y2C6RMUo5Ik | Grade: HD 82

- Provisioned an Ubuntu 24.04 LTS VM on Microsoft Azure with SSH access, network security rules, and LVM multi-disk storage.
- Built a full PKI with EasyRSA: Certificate Authority, server and per-client certificates, certificate-based VPN authentication.
- Deployed OpenVPN with iptables NAT and firewall rules, enforcing role-based access between admin and standard client profiles.
- Containerised internal web services with Docker, restricted to admin clients by firewall rule.
- Automated monitoring and log rotation with bash scripts managed as systemd services, removing daily manual log checks.

GymHub: Fitness Forum - Backend Developer, Team Lead

Jun 2024 - Sep 2024

RMIT University coursework | github.com/DuongTranDang1004/gymhub-server

- Built caching with Java objects, later migrated to Redis, on top of Supabase Cloud PostgreSQL.
- Used JPA, Hibernate ORM, and DTOs for persistence and structured inter-layer data exchange.
- Applied Spring MVC with Controller-Service-Repository separation.
- Used Java multithreading to serve concurrent requests, roughly halving response time on batch endpoints.

Insurance Management System - Backend Developer

Jun 2023 - Sep 2023

RMIT University coursework | github.com/DuongTranDang1004/Team6_InsuranceSystem_FurtherProgramming

- Designed OOP classes using SOLID principles and high cohesion / low coupling, covering edge cases such as unauthorised claims access.
- Applied MVC, Comparator, DAO, Observer, and Singleton design patterns for scalability and maintainability.
- Used PostgreSQL with SQL queries through Java ORM, with ACID-compliant transaction management.
- Applied Java multithreading for concurrent table population.

EDUCATION

Royal Melbourne Institute of Technology (RMIT), Ho Chi Minh City

2022 - 2026

Bachelor of Information Technology | Major: Web and Mobile Development | GPA: 3.2

Nguyen Sieu High School, Hanoi

2020 - 2022

A Level (Cambridge Assessment International Education)
