PROFESSIONAL SUMMARY

Full-stack developer specializing in modern JavaScript technologies such as React.js, Node.js, and Strapi. Experienced in building scalable web applications, APIs, and custom CMS solutions. Also skilled in developing Windows desktop applications using C# and .NET. Focused on clean architecture, performance, and delivering reliable production-ready software.

EDUCATION

09/2019 - 08/2024 | FPT university – Software Engineering

TECHNICAL SKILLS

Programming Language: JavaScript, .Net,

Framework: React JS, ASP.NET, WPF, Windows Forms, Ruby on Rails, Wordpress, Nextjs, Strapi.

Database: MySQL, SQL Server, SQLite, Mongodb

Other tool: Git, Jira, Bitrix24

WORK EXPERIENCE

03/2025 – Now | Lotusa – Fullstack developer

01/2024 – 12/2025 | JIT – Fullstack developer

01/2023 – 04/2023 | HostingViet – Wordpress developer

09/2022 – 12/2022 | NAL VIETNAM – Backend developer

HIGHLIGHT PROJECTS

Kite-edu website

04/2025 – Now

Project Description	Developed a comprehensive education platform that enables schools to manage classes, teachers, and students within a centralized system. The platform also includes an exam marketplace where users can purchase practice tests and learning materials. Additionally, an affiliate marketing system was implemented to allow partners to promote exam content and earn commissions. The system was designed for scalability and efficient management of educational operations and digital learning products.
Teamsize	10
Position	Fullstack developer
Responsibility	- Developed full-stack features using React.js (frontend) and Strapi (headless CMS/backend). - Designed database structures for managing schools, classes, teachers, students, and exam content. - Built an exam marketplace allowing users to browse, purchase, and access practice tests. - Implemented an affiliate marketing system for tracking referrals and commissions. - Developed RESTful APIs and integrated them with the frontend application. - Optimized MySQL queries and backend performance for handling large datasets. - Implemented role-based access control for administrators, teachers, students, and partners. - Maintained system stability through debugging, performance tuning, and feature improvements.

Technologies used	Programming Language: Javascript Framework: Reactjs, Strapi cms Database: Mysql Programming Principles: Design pattern, SOLID, DRY Tool: GitHub, Bitrix24

AWING Website

03/2025 – 04/2025

Project Description	Developed a responsive landing page for Awing to showcase products and services and improve user engagement. Implemented smooth animations and interactive UI effects to create a modern user experience. Built the website with multi-language support to reach a broader audience. Optimized performance, SEO, and page structure to ensure fast loading and better conversion rates.
Teamsize	5
Position	Fullstack developer
Responsibility	- Developed and maintained the landing page using Next.js for the frontend and Strapi as a headless CMS. - Implemented responsive UI and smooth animations to enhance user experience across devices. - Built and integrated multi-language (i18n) support to serve different regions. - Designed and consumed RESTful APIs between Next.js and Strapi for dynamic content management. - Optimized website performance, SEO, and page loading speed. - Collaborated on deployment, debugging, and ongoing improvements to ensure stable production performance.
Technologies used	Programming Language: Javascript Framework: Nextjs, Strapi Database: Mysql Programming Principles: Design pattern, SOLID, DRY Tool: GitHub, bitrix24

Management of Apartment Services

05/2024 – 8/2024

Project Description	Developing software for managing condominiums for the Rickland building (Cau Giay, Hanoi), including house management, vehicle management, invoice management, expenses, services, and resident management.
Teamsize	5
Position	Team leader, Back-end developer
Responsibility	- Build and develop RESTful APIs using ASP.NET to handle requests from clients and manage data. - Develop reusable components in the codebase, manage state with Entity Framework, and optimize data query performance. - Use JWT for authentication and to control user login sessions, ensuring system security. - Utilize Quartz to schedule periodic tasks, such as sending notifications, updating data, and executing background jobs. - Connect to and process data from external API sources using HttpClient, ensuring accuracy and efficiency of the returned data.
Technologies used	Programming Language: .NET Framework: ReactJS, ASP .NET Database: SQL Server Programming Principles: Design pattern, SOLID Tool: GitLab
