

NGUYEN DUC TIEN

Hanoi, Vietnam • +84-982-872-004 • carina.ndt@gmail.com • [GitHub](#) • [Linkedin](#)

EDUCATION

Thang Long University

Bachelor of Science in Information Technology

Relevant coursework: Data Structures & Algorithms, OOP, Software Development, Database Management System,...

Hanoi, Vietnam

Graduated: Apr 2026

SKILLS

Languages: Python, JavaScript, C#, Golang, C++, HTML, CSS

Frameworks: ASP.NET/.NET, FastAPI, LangGraph, LangChain, ReactJS, Node.js, ExpressJS

Databases: PostgreSQL (pgvector), SQL Server, MongoDB Atlas, SQL

AI/ML: RAG, Multi-Agent Systems, Prompt Engineering, OpenAI API, Anthropic API, Hugging Face, FAISS, Vector Databases, Machine Learning

Tools: Git, Docker, Postman, VS Code

EXPERIENCE

VinSmart Pay (VinGroup AI in Action - FinTech Internship)

Apr 2026 – Jun 2026

AI Engineer – Individual Project

github.com/ductiens/vsmartpay-ai-support-agent

- Designed and built an end-to-end AI customer support agent for VSmartPay e-wallet independently, architecting a dual-pipeline system (Legacy RAG + LangGraph Multi-Agent Orchestration) switchable via config.
- Implemented a 6-node LangGraph state machine with specialized agents: Injection Guard (prompt injection detection), Intent Agent (14-class classification with 0–1.0 confidence scoring), RAG Agent, Escalation Agent (auto ticket creation), Clarification Agent, and Grounding Guard (hallucination detection).
- Achieved 100% Escalation Recall across 45 real-world test cases, ensuring zero missed high-priority security events (fraud reports, OTP leaks, account compromise).
- Maintained p95 response latency of 448ms on multi-agent pipeline, well within the 2s customer experience threshold.
- Built 64 automated unit and integration tests covering 100% of agents, guards, wallet tools, RAG search, and API endpoints.

Technologies: FastAPI, LangGraph, LangChain, OpenAI API, MongoDB Atlas Vector Search, FAISS, Docker, JWT

Zamiga Joint Stock Company

Aug 2025 – Apr 2026

Full-Stack Developer (ReactJS & .NET)

Hanoi, Vietnam

Provincial Innovation Index (PII)

- Developed and maintained both frontend (ReactJS) and backend (.NET) modules for a provincial innovation statistics platform.
- Designed and implemented RESTful APIs to support dashboard visualization, statistical reports, and data management.
- Built responsive React interfaces and integrated backend services for charts, tables, filtering, and data analysis.
- Processed and validated business data across frontend and backend layers to ensure data consistency and accuracy.
- Collaborated with cross-functional teams to define API contracts, troubleshoot integration issues, and optimize application performance.

Digital Government Platform – Quang Ninh Province

- Developed frontend features using ReactJS and implemented backend services with .NET for digital government modules.
- Built role-based access control (RBAC) functionality, including user management, permission configuration, and dynamic navigation.
- Developed election result management APIs and user interfaces to aggregate and display voting statistics across all communes and wards in Quang Ninh province.
- Participated in database interaction, API development, testing, debugging, and deployment throughout the software development lifecycle.
- Worked closely with backend engineers, QA, and business analysts to deliver features and resolve cross-layer issues.

Technologies: ReactJS, JavaScript, C#, ASP.NET/.NET, RESTful APIs, SQL Server, HTML5, CSS3, Git

PROJECTS

KingModerator – Discord AI Moderation System	Apr 2026 – Jun 2026
<i>AI Engineer Lead 3-member team VinUni, VinGroup AI in Action Program</i>	
• Built document ingestion pipeline (PDF/DOCX/Markdown) transforming unstructured documents into a searchable Discord knowledge base. • Implemented RAG-based Q&A using OpenAI embeddings and pgvector, enabling context-aware answers for community moderation. • Built backend workflows for AI content filtering, confidence-based routing, and moderator review queues. • Integrated Braintrust for LLM tracing, knowledge-gap analysis, and AI response monitoring.	
<i>Technologies: FastAPI, PostgreSQL, pgvector, SQLAlchemy, Alembic, discord.py, OpenAI API, Anthropic API, Braintrust, Docker</i>	
Movie Ticket Booking Website	2025
<i>Backend Lead Graduation Project 2-member team</i>	
• Designed and built RESTful APIs for movies, showtimes, seat selection, and order management. • Implemented JWT authentication, real-time seat availability via Socket.IO, and Cloudinary integration for media.	
<i>Technologies: Node.js, ExpressJS, MongoDB, Socket.IO, JWT, Cloudinary</i>	
Home Credit Default Risk Prediction	2024
<i>Data Science Kaggle Project</i>	
• Processed and analyzed large-scale financial dataset using PySpark; engineered features to improve model signal quality. • Built and evaluated machine learning models for customer default risk classification.	
<i>Technologies: Python, PySpark, Pandas, NumPy, Scikit-learn</i>
